PROFESSIONAL SUMMARY

Frontend Developer specialized in building modern web applications using React, Next.js, and Vue. Experience developing real-world products and web tools, integrating frontend with backend systems, and implementing features focused on scalability, performance, and user experience.

Focused on building maintainable, responsive, and user-centered interfaces, with knowledge of frontend architecture, global state management, REST API integration, and collaborative development workflows using Git and agile methodologies.

EXPERIENCE

Fullstack Developer

Campus Mariana Casella | Feb 2026 – Present

Development and maintenance of frontend features using Vue

Integration with backend systems built with PHP/Laravel

Implementation of improvements and new features in production environments

Working with PostgreSQL (Neon) for data integration and validation

Collaborative task management using GitHub Issues and Projects

Configuration and usage of local development environments with Docker

Active participation in debugging, functional testing, and UX improvements

Frontend Developer — Language Learning Platform

Jan 2026 – Present

Development of frontend interfaces and reusable components

Implementation of interactive logic and navigation flows

Optimization of user experience and usability

Collaborative work under agile methodologies using ClickUp

Participation in product iterations and continuous improvements

Freelance Frontend Developer

2024 – 2025

Development of landing pages focused on conversion and performance

Responsive and mobile-first implementation

Integration of contact forms and interactive features

Migration and modernization of projects to Next.js

Custom interface development based on client requirements

PROJECTS

Dental Laboratory SaaS Platform — In Development

Development of a SaaS platform focused on digitalization and operational management for dental laboratory workflows.

Building modern frontend architecture with Next.js, React, and Tailwind CSS

Authentication and database integration using Supabase

Development of admin dashboards and dynamic entity management

Implementation of scalable architecture and reusable components

Handling complex forms, state management, and user workflows

Focus on user experience, performance, and maintainability

Vault — Developer Command Manager

vault.cinlodev.com

Developer-focused tool designed to centralize and optimize development workflows through reusable command management.

Development of a modern productivity-focused interface

Fast organization and access to frequently used development commands

Workflow optimization to reduce operational friction

Frontend architecture built with Next.js, React, and Tailwind CSS

Design focused on Developer Experience (DX)

Emphasis on speed, accessibility, and maintainability

Email Testing Platform

email-test-public.vercel.app

Tool developed for testing and visualizing emails in development environments.

Simulation and validation of email delivery workflows

Visualization of rendered email content for testing purposes

Docker-based architecture for isolated development environments

Development focused on debugging and integration testing

Frontend interface built with Next.js and React

Project used as an internal development tool

TECH STACK

Frontend

React · Next.js · Vue · JavaScript · TypeScript · Tailwind CSS

Backend

Node.js · Express · PHP · Laravel

Databases & Backend Services

PostgreSQL · MongoDB · Supabase

Workflow & Tools

Git · GitHub · Docker · ClickUp

LANGUAGES

Spanish — Native

English — Technical reading and documentation
